DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

- I. An apparatus for and method of continuous determination of a parameter characterizing a patient's left ventricular pumping action.
- II. An apparatus for and method of continuous determination of the cardiac volume responsiveness indicator

The species are independent or distinct because they are drawn to distinct embodiments which do not overlap in scope since they are not obvious variants of each other and can have a materially different design or mode of operation.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations

Art Unit: 3735

of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

This application contains claims directed to the following patentably distinct species within species II:

A. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wherein the first reading is a size of the left ventricle determined by means of X-ray densitometry, positron emission tomography, transesophageal echo cardiography, transthoracic echo cardioagraphy, or other two- or three-dimensional imaging techniques.

B. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wheirne the first reading is a reading determined by a measurement selected from plethysmography, measuring electric impedance, measuring electric conductivity, ultrasound, measuring the pressure in the *Arteria pulmonalis*, and direct flow measurement.

The species are independent or distinct because they are drawn to distinct embodiments which do not overlap in scope since they are not obvious variants of each other and can have a materially different design or mode of operation.

If species II is elected, the applicant is further required under 35 U.S.C. 121 to elect a single disclosed species between species A and B for prosecution on the merits

to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, claims 11 and 41 are generic.

Page 4

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

This application contains claims directed to the following patentably distinct species within species II:

- C. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wherein the adaptation parameters k, l, and m are adaptation functions.
- D. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wherein the adaptation parameters k, l, and m are experimentally calculated constants

The species are independent or distinct because they are not disclosed as capable of use together, and they have different designs or modes of operations.

If species II is elected, the applicant is further required under 35 U.S.C. 121 to elect a single disclosed species between species C and D for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11, 20, 21, 41, 49, and 50 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

This application contains claims directed to the following patentably distinct species within species II:

E. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wherein the third reading at least approximately corresponds to the patient's thoracic compliance.

F. An apparatus or method for continuous determination of the cardiac volume responsiveness indicator, wherein the third reading at least approximately corresponds to the respiration pressure or the volume flow of the patient's tidal air.

The species are independent or distinct because they are not disclosed as capable of use together, and they have different designs or modes of operations.

If species II is elected, the applicant is further required under 35 U.S.C. 121 to elect a single disclosed species between species E and F for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11 and 40 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia C. Mallari whose telephone number is (571) 272-4729. The examiner can normally be reached on Monday-Friday 10:00 am-6:30 pm.

Application/Control Number: 10/743,515

Art Unit: 3735

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor, II can be reached on (571) 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
